The following UHF Tactical Mutual Aid Channel (TMAC) Plan has been developed by the TMAC Working Group with representatives from L.A. County Fire, L.A. City Fire, Verdugo dispatch, and South Bay cities. Area E and F cities were also solicited for input.

Formatted in Excel by Capt. Steve Vance, Beverly Hills Fire. This workbook includes separate charts sorted by Zone/Channel number and Recieve (Rx) frequency.

NOTE:

Zones 1 & 2 are reserved as "Home" zones for the individual agency's use and will therefore vary from agency to agency.

Zones 2-10 have the corresponding zone number as the first character(s) of the first channel only.

Channel numbers 1-500 are reserved for the VHF TMAC.

The following VHF Tactical Mutual Aid Channel (TMAC) Plan has been developed by the TMAC Working Group with representatives from L.A. County L.A. City Fire, Verdugo dispatch, and South Bay cities. Area E and F cities were also solicited for input.

This VHF channel plan reflects the new 65 channel Fire Fcope (F/S#) minimum channel load as indicated in the far right column. The first 10 zone channels) are the recommended L.A. County TMAC. The additional zones, ie. Zone 11, are for additional channels, or are in lieu of MPL for Non-M (MPL= user selectable PL for USFS & NIFC freqs). Radios with limited channel capacity and Non-MPL are recommended to program the MPL channel simplex carrier squelch mode (CSQ). A Home Zone is recommended for custom agency needs. It is recommended that the Home Zone be placed of this program as the system number can be the same as the "personality". This will assist in writing the codeplug (program).

Formatted in Excel by Capt. Steve Vance, Beverly Hills Fire. This workbook includes separate charts sorted by Zone/Channel number and Receiver frequency.

US&R frequencies in this document are for activated federalized US&R teams only.
